Colourless to light yellow liquid

8D Sodium Hyaluronate is composed of Sodium hyaluronate cross-linked polymer, Sodium hyaluronate (0.8 million~1.5 million), Sodium hyaluronate (0.5 million~0.8 million), Acetylated sodium hyaluronate, Hydrolyzed sodium hyaluronate (5000~10000), Phenoxyethanol, Ethylhexylglycerin, Water, Hyaluronic acid, Hydroxypropyltrimonium chloride hyaluronic acid, and hydrolyzed hyaluronic acid.

Three-dimensional moisturizing system and skin penetration mechanism

Through scientific proportions, 8D sodium hyaluronate forms a three-dimensional sponge layer structure, precise layering and positioning, multi-layer water storage, osmotic hydration, epidermal water blocking, and uses a scientific structure to weave a three-dimensional water network for the skin.

Anti-pollution, anti-oxidation mechanism

8D sodium hyaluronate builds a multi-defence system through physical isolation-biological repair, based on the skin oxidative stress and barrier damage mechanism caused by environmental exposure, builds an active anti-pollution barrier, and simultaneously achieves free radical scavenging and oxidative damage repair.
